

We realize that for the past two weeks the MSPiRiT Pop Quiz was not linked to any training module. That is because right now the behavior of the system requires particular steps in order to change an infant's breastfeeding status and correct food packages.

The five steps you take to properly change an infant's breastfeeding amount are: 1) Go into mom's record 2) Select the "Health Information" tab 3) Select "Infants Born From This Pregnancy" 4) Edit the infant record accordingly 5) Enter today's date for "Date Breastfeeding Verified."

The three very important steps to remember when correcting food packages after an infant's breastfeeding status changes are: 1) review both the infant and the mom's food package 2) remove any future food packages 3) create food package for today then create food packages for key dates (i.e. 6 month birthdate).

Thank you for your continued patience.
